

Put our experience and design expertise to work for you.

Whether you have a high volume gaming console or a low volume medical device, we have the skill and knowledge to help you solve complex design challenges. The diversity of our experience allows us to take you from concept to production on time and on budget. Leverage our team to drive innovation and efficiency today.

## Engineering & Mechanical Design

With a full time staff having many years combined product and device design experience, it is no surprise our clients continue to call on us to tackle their most aggressive projects. Our team takes pride in a job well done and we engage your engineering challenges with a passion.

## Industrial Design

Our design group utilizes a rational thought-out design process that finds a balance between the needs of the user, the desires of the client and the manufacturability of our designs. This combination of form, function and human factors will help lead your product to market successfully.

## Design for UL, CE & Other Regulatory Support

Our team is experienced in supporting design programs that require UL, CE and many other regulatory approvals. We routinely design parts and assemblies that meet the exacting standards of design various regulations.

## Electronics Design & Software Development

Our network of strategic partners is a great value to our clients. Our existing partner network allows us to handle the electronic design and software development for any program. It is critical that the relationship between the electronics, software and mechanical components be carefully integrated.

## In-House Rapid Prototyping

With our in-house rapid Prototype FDM model printer, we are able to make quick functional parts and assemblies for all stages of design programs. Our ability to create these models in-house gives us a distinct advantage over many of our competitors.
